

Prep for The ACT (Grades 9-12)

ACT (or SAT) test results will most likely be required by college and universities for admission, scholarship, and course placement. You have spent time and effort in getting an education and your coursework already prepares you to take the ACT—but learning test strategies and getting supervised practice will help you to do your best. Preparing in this manner for the ACT will objectively assess college readiness and individual academic strengths and weaknesses that can be identified and improved upon prior to taking tests for college entrance. This is particularly valuable to students who desire to avoid taking college placement exams or non-credit remedial courses. Please note that most scholarship opportunities also require prescribed ACT scores.

This course will provide:

- Test-taking strategies and tips for time management for each of the four subject areas (English, Math, Reading and Science)
- Practice of each strategy including timed practice using actual ACT test questions in each of the subject areas
- Review of academic content required within each discipline (grammar, rhetorical skills, algebra, geometry, general math, reading comprehension, understanding graphs, charts, etc.)
- Direct instruction over core subject content, terminology, and predictable elements of the ACT
- Ample practice test passages and questions to ensure that any potential gaps are filled.
- Aid in the development of an individualized plan for each student which will identify strengths and weaknesses in test taking and/or areas of academic content.
- An environment that will foster a positive mindset toward the ACT and bolster confidence in the student's ability to do his/her best.

Supply List:

- #2 Soft lead pencils and a good eraser
- An ACT approved calculator – (TI 30xa or TI 30xs series recommended)
- Spiral notebook
